RIEMPIMENTO ELETTRICO-PNEUMATICO *ELECTRO-PNEUMATIC FILLING*

In 2014 and 2015 the site is planned to be extended to include:

- multi-level covered parking for 300 vehicles;
- automated warehouse for 11,000 loading units providing a unit capacity of 1,000 kg;
- logistic area for orders preparation, internal assembling and spare parts management. 12 units with 1,000 boxes to pick light semi-processed products will be located in this area;
- machine assembling area of about 5,000 m². Separating the assembling department from the production department will guarantee a quiet and comfortable working environment;
- 2,000 m² exhibition area and testing laboratory;
- offices on two floors of 1,800 m² each;
- 1,800 m² canteen and museum.

When the extension works have been completed (2015), the final situation will be as follows:

- total land area 170,000 m²
- covered area 40,000 m²
- green area 100,000 m²
- co-generator 1,000 electric kW + 1,250 thermal kW
- power plant 1,700 electric kW

It is expected that 90% of the heating requirements will be covered by the co-generator and 70% of the energy needs will be supplied by the solar power plant.
